PROGRAMMING SKILLS

Languages: Javascript, Ruby, HTML, CSS

Database Tools: MongoDB, PostgreSQL

Frameworks: Node.js, Express.js, AngularJS, Ruby on Rails

Other: Git, Github, Bootstrap, BCrypt, AJAX, Underscore.js, jQuery, Heroku

RELATED EXPERIENCE

General Assembly San Francisco, CA

An intensive 12-week program where I learned and practiced web development skills to become a job-ready full stack web developer.

Web Applications

Sandwich Builds – sandwich-builds.herokuapp.com | github.com/JustinRegiReyes/sammichBuilder

A web app for the sandwich craftsman. Submit and view other sandwich recipes and their descriptions. Learn the craft and builds made by other lovers of the sandwich craft.

Responsibilities: Individual project where I built the front end and back end. I focused on having user's sandwich recipes be easily found, built, remembered, and viewed.

Technologies: Javascript, Node.js, BCrypt, BusboyConnect, Underscore.js, Express.js, MongoDB, Mongoose, jQuery, Cloudinary, Bootstrap, Body-Parser, File-stream, CSS

Throw Words – throw-words.herokuapp.com | github.com/JustinRegiReyes/Throw_Words

A web app game where two teams try to guess as many words as they can before their team clock runs out! One word is displayed out of the playlist for teams to guess. If guessed correctly or passed, the next word is displayed.

Responsibilities: I created the gameplay and rules of the game. Primary focus was to get players engaged into the beloved CatchPhrase game with a new feature. Built the web-server and front end.

Technologies: Javascript, Node.js, BCrypt, Underscore.js, Express.js, jQuery, MongoDB, Mongoose, Bootstrap, Body-Parser

Coding Bootcamp Reviews – codingbootcampreviews.herokuapp.com | github.com/JustinRegiReyes/c-bootcamp-reviews

A web app for those looking for user feedback reviews and information for coding bootcamps in the bay area. Users can click bootcamps available on the site and see the stats and reviews of that bootcamp.

Responsibilities: Took the role as lead developer for this group project. I focused on the database models, their methods and relations. Displaying data was integral for this project and I built the methods to query the data, as well as the bar graphs that displays the data.

Technologies: Ruby, Ruby on Rails, Javascript, JQuery, BCrypt, Bootstrap, PostgreSQL

Assassins – assassinsgame.herokuapp.com | github.com/JustinRegiReyes/assassins

A web app that helps organize, put together, and add interactivensess to the game known as assassins. Admins can create a game that assassins can join with if they know the keycode. Assassins can sign up for a game and where they can make posts, view their target, and interact with other assassins.

Responsibilities: For this individual project I dove into database relationships in MongoDB. I wrote controller methods that manipulated user model's based on the status of another user or game. I also created the rules and gameplay for the application.

Technologies: MongoDB, Express.js, AngularJS, Node.js, Body-Parser, Bootstrap, CSS, BCrypt, Javascript

PROFESSIONAL EXPERIENCE

Jamba Juice

Shift Lead

Team Member

American Canyon, CA

May 2015 – July 2015
